

The Goal of

Esthetic Dentistry

We can repair chipped or broken teeth

We can replace silver fillings with white

The result—a dazzling smile

The goal of esthetic dentistry is to transform an average smile into a terrific smile. To accomplish this goal, we analyze every aspect of a smile and then correct the problem.

What makes a beautiful smile?

Terrific smiles have several things in common:

- The teeth are straight, not crooked.
- The teeth are evenly spaced with no gaps.
- The teeth are white, not stained.
- The top teeth show when you smile, but not the gums.
- The gumline is smooth, not uneven.
- The edges of the top teeth smoothly follow the curve of the lower lip.

All of these problems can be solved with esthetic procedures, so even if you weren't born with a beautiful smile, you can still have one.
